

Dataset 4: Psychometric Network

Description

Survey responses collected from students of PL4246 (AY2023/24 (Sem 2), AY2024/25 (Sem 1), AY2025/26 (Sem 2)) for the statistics anxiety rating scale (STARS). There are a total of 132 (64 + 35 + 33) completed survey responses. The anchors for the Likert scales are as follows: 1 (Strongly Disagree/No anxiety) and 5 (Strong Agree/Strong anxiety).

Datasets

- STARS survey items and descriptions and labels (`stars-items.md`)
- compiled survey responses (`stars-data_132.csv`)

Helper Script: `dataset4.R`

The attached script provides code to convert the survey data into a partial correlation matrix for network analysis. Also includes options to filter survey responses, or select specific items, prior to constructing the correlation matrix.
